The power of innovation

UNITY 360
Unify your security

Based on Prelude SIEM and Vigilo NMS, the Unity360 solution allows you to unify your security management with the availability management favoring NOC-SOC convergence. In the same application you can combine the «Confidentiality-Integrity-Availability» triptych. With Unity360 you optimize your acquisition, training and operating costs while improving the overall efficiency of your monitoring. Unity360 tracks the entire security chain from the detection of an incident, whether accidental or intentional, to the investigation and then its resolution to the resumption of activity.

Features

> First NOC-SOC (Network Operation Center - Security Operation Center) convergence solution

> Based on an open-source core

> Standards : IDMEF/IODEF, SNMP, SSL, AMQP, etc

> Web 2.0 thin client

> Modular and resilient architecture

> Strong abilities of integration and customization

ALERT
Real-time notification

Unity360 analyzes in real time all the events in your information system. Unity detects incidents, whether they areconcern security or availability. These alerts are presented in a single portal to facilitate the work of operators. The Alert module is based on the SNMP and IDMEF standards.

ANALYZE
Transversal analyzes

Through ergonomic interfaces designed for operation, the Analyze module allows you to graph all the data stored in Unity. Configurable dashboards allow you to mix alerts, incidents, alarms and all their attributes. It is also possible to configure and program technical and functional reports.

ARCHIVE
Long-term storage

All data from the information system is stored and indexed in a NoSQL BigData architecture. Advanced search interfaces make it possible to investigate within traces, logs, netflows, metrology, vulnerabilities, for a unified vision of security.

Convergence NOC - SOC

Unity360 is taking a major step forward in the process of rationalizing the operating costs of information systems. The current dichotomy between NOC and SOC activities is an additional cost factor with a lower efficiency.

While respecting everyone's prerogatives and in particular the CISO decision-making chain, Unity360 makes it possible to federate the activities of the various operators and to unite the teams around a common tool.In addition, the simplified sharing of information between NOC and SOC is an important factor in the overall efficiency of the operation.
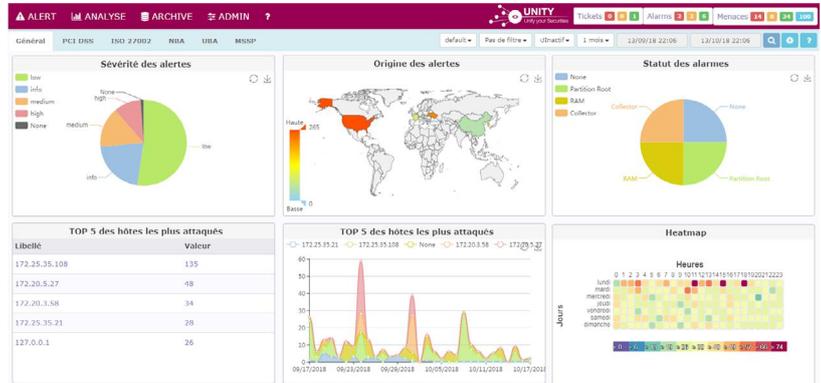

Services

PLAN	DEPLOY	RUN
Architecture specification and conception, planning, resources	Assistance mode or «turnkey» on the deployment	Outsourced or remotely. Alert tracking. Reporting

TRAINING	SERENITY	EMERGENCY
Configuration and operation training. Transfer of skills.	Assistance with handling and configuration Periodic review	Assistance in case of incidents. Escalation

ABOUT CS

As prime contractor in the design, integration and operation of mission-critical systems, CS is present all long the value chain for its customers. With a turnover of €170M and 2000 employees, CS is an established supplier acknoledged by its major customers thanks to the expertise & commitment of its staff.
